Projects

- Personal Portfolio Website: saripagurek.com
 - Designed in Figma; created using HTML, CSS, and JavaScript
 - GitHub repository: <https://github.com/saripagurek/saripagurek.github.io>
 - Gained a working knowledge of HTML and CSS through many iterations of the website, as well as the ability to implement design ideas preplanned in Figma
- 'Artly' Art Sharing App Design: <https://github.com/saripagurek/Artly>
 - Design of art sharing and selling app created and prototyped in Figma
- Generative 3D Shapes: <https://editor.p5js.org/sari.pvm/sketches/rngL4aRpm>
 - Learned a working knowledge of the graphics library p5.js
 - Created an OBJ exporter to enable 3D printing by collecting vertices of cubes
- Mario Platformer Video Game: <https://Mario-Platformer.saripagurek.repl.co>
 - Created using p5 library with brython (js-based python interpreter)
 - Continued my understanding of Python by creating a 2D platformer game with a gravity simulation, collision detection between the character and the levels, recursion, and local storage to track the player's score
